

AIGenStudio - Gemini CLI 완벽 가이드

프로젝트 개요

제공된 프로젝트 구조를 기반으로 모듈식 확장 가능한 AI 이미지 생성 플랫폼을 구축합니다.

기존 프로젝트 구조 (제공된 파일 기반)

모듈화 리팩토링 전략

1. 핵심 시스템 분리 (코어만 남기기)

src/aigen_studio/core/extension_system.py

python

```
"""확장 시스템 - 기존 page_manager.py를 확장 가능하게 개선"""
```

```
import importlib
import asyncio
from pathlib import Path
from typing import Dict, List, Optional, Any
import json
from abc import ABC, abstractmethod
```

```
class ExtensionBase(ABC):
```

```
    """모든 확장의 기본 클래스"""
```

```
    def __init__(self):
```

```
        self.enabled = True
```

```
        self.config = {}
```

```
        self.dependencies = []
```

```
    @abstractmethod
```

```
    async def initialize(self, app) -> None:
```

```
        """확장 초기화"""
```

```
        pass
```

```
    @abstractmethod
```

```
    async def cleanup(self) -> None:
```

```
        """확장 정리"""
```

```
        pass
```

```
    def get_pages(self) -> Dict[str, Any]:
```

```
        """페이지 반환 - 기존 pages/ 구조 호환"""
```

```
        return {}
```

```
    def get_api_routes(self) -> List[Any]:
```

```
        """API 라우트 반환"""
```

```
        return []
```

```
    def get_ui_components(self) -> Dict[str, Any]:
```

```
        """UI 컴포넌트 반환"""
```

```
        return {}
```

```
class ExtensionManager:
```

```
    """확장 관리자 - 기존 page_manager.py 대체"""
```

```
    def __init__(self, app):
```

```
        self.app = app
```

```
        self.extensions: Dict[str, ExtensionBase] = {}
```

```
        self.extension_paths = [
```

```
            Path("src/aigen_studio/extensions"), # 내장 확장
```

```
            Path("extensions") # 사용자 확장
```

```

    Path("extensions"), # 사용자 확장
